

More info !

Montandon tracheostomy tube

The Montandon tube is specifically designed for tracheostomy intubation, ensuring easy insertion and secure fixation. Made from thermosensitive, silicone-coated PVC, latex-free and phthalate-free, it adapts to body conditions while minimizing the risk of irritation.

CE certified, it is available in two versions: reinforced and non-reinforced.

Secure ventilation and optimal sealing

Equipped with a high-volume, low-pressure cuff, it ensures secure ventilation and optimal sealing. Sterile, latex-free and phthalate-free, this single-use tube provides maximum patient comfort and helps prevent cross-infection.

Non Reinforced

Internal Ø (mm)	External Ø (mm)	Cuff Ø	Length (mm)	Reference
7.0	9.7	20.0	308	29-7010
8.0	11.0	25.0	315	29-8010
9.0	12.3	28.0	320	29-9010
10.0	13.7	32.0	327	29-1010

Reinforced

Internal Ø (mm)	External Ø (mm)	Cuff Ø	Length (mm)	Reference
7.0	10.2	20.0	308	29-7012
8.0	11.6	25.0	315	29-8012
9.0	12.9	28.0	320	29-9012
10.0	14.2	32.0	327	29-1012

Technical data

- Made from thermosensitive, silicone-coated PVC:** Provides improved adaptability to body conditions, reducing the risk of irritation.
- Special shape for tracheostomy intubation :** Designed to facilitate insertion and ensure secure fixation.
- High-volume, low-pressure cuff:** Minimizes the risk of tracheal injury while ensuring optimal sealing.
- Murphy eye with smooth finish**
- Radiopaque line :** Allows radiographic verification of the Montandon tube position, enhancing insertion safety. (Device not compatible with MRI)
- Marked pilot balloon :** Enables clear visualization of inflation and deflation for precise control.
- Latex-free, phthalate-free :** Reduces the risk of allergic reactions and exposure to potentially harmful substances.
- Sterile, single-use :** Prevents cross-infection.
